

2100-SSCR-CFB-PP

Ovaj specijalni torusni transformator kombinuje sve kvalitete svojih predhodnika. 100 W puš-pul ima primarnu impedansu 2 kOma, podržava 4 izlazne cevi kao sto su 6550 ili KT88, dve po dve u puš-pulu. Namotaj rešetki Ultra Linear povratne sprege je potpuno odvojen od primara. To omogućava niže napone rešetki od anodnih napona, pa samim tim veoma smanjuje harmonička izobličenja. Takodje dodata su još dva odvojena namotaja katodne povratne sprege 10% što veoma povećava damping faktor pojačavača koji ne koriste negativnu povratnu spregu. Za praktičnu primenu molim pogledajte (*) gde je u poglavlju 8 razmatrana aplikacija sa dve cevi. Samo izlazne cevi treba da se udvoje radi potpunog iskorišćenja ovog posebnog izlaznog transformatora.

- (1): calculated under the conditions of balancing the DC-currents and the AC-anode voltages of the powertubes driving the transformer
- (2): measured at 230Vrms at 50Hz over total primary
- (3): calculation at 1 Watt in Rls; ri and Rls are pure Ohmic
- (4): defined as FDF = log(fh3/fl3) = number of frequency decades transferred
